				slot for a test strip or cuvette.				

Issues observed

1. B.P. machine digital not working because it needs battery and can't be accessed or got by the facility from there region
2. Most assets were delivered without names of assets indicated and removed/ not in their kits or sets
3. The assets are not engraved it's hard to separate them from other assets given to them by different people or organization
4. Sets were distorted and they supplied item per item which is hard for the nurses to identify which equipment is supposed to be in each set/ kit
5. A wall clock was damaged while on the way bringing it
6. The nurses at the facility have no skills to operate some machines or assets

Recommendation

1. Orientation is needed on the usage of some assets
2. Engraving needs to be done
3. Finding a way for how to repair and maintain the assets.

Conclusion

Most of the assets are still new and in good condition, and some in store, all assets in the asset register/ list were delivered and received by the facility and functioning well. All assets are not engraved.

Dont know life in months for the assets

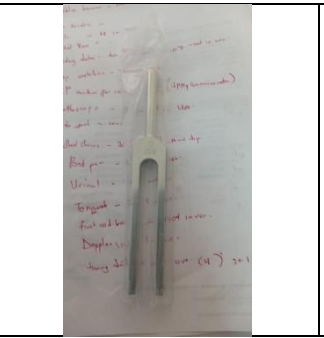

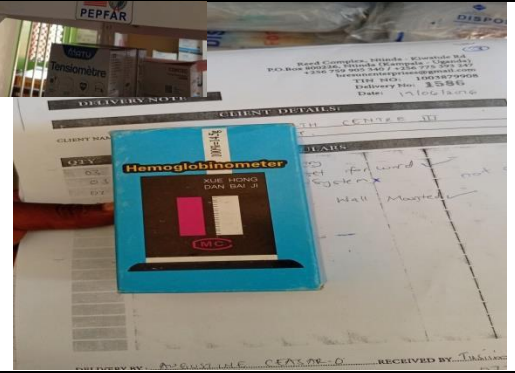

Prepared by;

NAMAYANJA VANESSA
